

XM satellite radio is the best and provides a technological advancement in radio service to those who desire to listen to radio at an affordable price on equipment that is also affordably priced. Getting the weather and traffic info, in a timely fashion, by just tuning into the station that is devoted to just that is a tremendous advantage over regular radio programming. It is time that government stop penalizing those who come up with creative ways in which to supply information to the public, especially the public that is willing to pay for the benefits that come with XM Satellite radio.
